Attempt : 1

Total Mark : 10

Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

In a file management system, users are required to provide a valid file name when creating new files. The system enforces specific rules for file names to maintain consistency and avoid potential issues. Your task is to implement a Java program named FileNameValidator that takes user input for a file name and validates it according to the specified rules.

Rules for Valid File Name:

The file name must consist of alphanumeric characters (letters and digits) only. The file name must have a minimum length of 3 characters.

Implement a custom exception, FileNameValidator, to handle cases where the entered filename does not meet the specified criteria.

Input Format

The input consists of a string S, representing the desired filename.

Output Format

The output is displayed in the following format:

If the entered file name meets the specified criteria, the program outputs

"Valid file name"

If the entered file name does not meet the criteria and triggers the `InvalidFileNameException`, the program outputs

"Error: Invalid file name. It must be alphanumeric and have a minimum length of 3 characters."

Refer to the sample output for formatting specifications.

Sample Test Case

Input: myfile123

Output: Valid file name

Answer

```
// You are using Java
import java.io.*;
import java.util.Scanner;
class InvalidFileNameException extends Exception{
    public InvalidFileNameException(String s){
        super(s);
    }
}
class FileNameValidator{
    public static void main(String[] args){
        Scanner sc=new Scanner(System.in);
        String name=sc.nextLine();
        try{
            if(name.length()<3)
                throw new InvalidFileNameException("Error: Invalid file name. It must
be alphanumeric and have a minimum length of 3 characters.");
            for(int i=0;i<name.length();i++){

```

```
        char ch=name.charAt(i);
        if(!Character.isLetterOrDigit(ch))
            throw new InvalidFileNameException("Error: Invalid file name. It must
be alphanumeric and have a minimum length of 3 characters.");
    }
    System.out.println("Valid file name");
}
catch(InvalidFileNameException e) {
    System.out.println(e.getMessage());
}
catch(Exception e){
    System.out.println(e.getMessage());
}
}
```

Status : Correct

Marks : 10/10
